## Telephone & Network Solutions الهواتف الأرضية - الإنترنت والبدايات

### Telephone Systems

As a business owner, you understand the importance of a telephone when it comes to communicating with your existing clients, your internal or external team and your wider business network, so what if your existing phone doesn't offer the flexibility you need? Whether you're an individual working from your home office or a business working from commercial premises, we want to understand your needs so that we can offer you the best solution. Voice over Internet Protocol (VoIP) phone systems are flexible, sophisticated but simple, adaptable to many different situations and a Cost Effective option for most businesses. It can save you between 30 to 50 percent in cost, compared to traditional phone bills and empowers your business to go far beyond the restraints of a typical phone system solution. Turkish Line Services, can evaluate your needs and pair the best fit VoIP solution for your business.

## Telephone & Network Solutions

### الهواتف الأرضية - الإنترنت والبدايات

#### Network & Cabling Services

Turkish line services, Cabling and Wiring professionals.

We connect your business, so you can connect to your customers! or, upgrade your connections, so that you can connect to your customers more efficiently and quickly, without interruption.

Turkish Line Services, we understand how important a properly planned and executed computing infrastructure is to your business. Our technicians are versed in industry best practise in relations to network mapping, setup and management. We will provide you with a concise IT road map.

#### PC Repairs

Computer hardware will always fail at some point and when it happens, it can be very frustrating!

We offer a comprehensive computer and IT repair service that can fix your personal or company's PC and laptop related issues.

Servers, workstations, firewall security, switches, routers, printers, monitors and other parts of your IT infrastructure all have one thing in common, they will all fail and when a component of your hardware infrastructure fails, we make every attempt at fixing it or, if needs be, replace it as quickly and efficiently as possible!

Our main goal is to ensure that you don't experience costly downtime.

## Telephone & Network Solutions الهواتف الأرضية - الإنترنت والبدايات

### Managed IT Services

Only the largest of companies need a full-time IT engineer on-site at all times, but many businesses still need regular, reliable IT support.

This is where Turkish Line Services comes in.

We offer a fully tailored package based precisely on your businesses circumstances and needs, providing the best price and a solution that has you maintaining IT operations smoothly and unobtrusively.

From regular site visits to remote assistance, expanding your IT infrastructure as your business grows, monitoring and maintaining your security and providing data recovery and cloud backup solutions we've got you covered.

## Telephone & Network Solutions الهواتف الأرضية - الإنترنت والبدايات

For those companies who struggle to get broadband coverage across the entire site, we provide the perfect solution for this.

We can supply you with a WIFI Solution which allows you to always connect to your business WIFI not matter where you are in the building. Whether you are in reception, the meeting room or out in the car park you will be connected to your WIFI.

# Telephone & Network Solutions

## الهواتف الأرضية - الإنترنت

We offer short term, clear contracts with expert guidance regarding our low-cost rates for line rentals, broadbands, maintenance and telephone systems.

Our services;

- Hosted IP Service
- Traditional PBX systems
- Lines and Call Bundles
- Broadband and Leased Lines
- Maintenance
- Billing Services

We strive on providing the best possible customer service to our customers with our friendly customer care team. Our aim is to always provide efficient advice, solutions and guidance to any customer queries. Also, unlike some, you are guaranteed to get your call answered by a 'real person' without being placed on hold for long periods of time.

## Video intercom جرس الباب مع الشاشة

### Key Feature

- 3.5-inch LCD screen with resolution: 320 × 480p
- 4 physical buttons with backlight
- Up to 500 contacts can be added to the device
- Dials number and calls indoor station with keypad module
- Unlocks door by PIN code with keypad module
- Multiple languages

### Typical Application

#### System Framework for Apartment

## Video intercom جرس الباب مع الشاشة

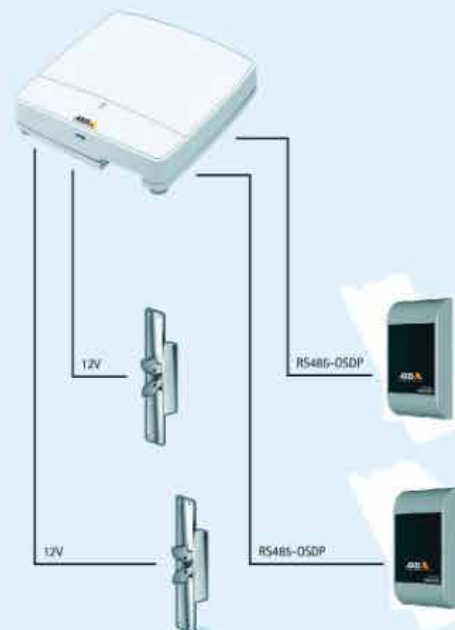

## Access control بصمة الدخول والخروج

Axis Network Door Stations combine video surveillance, two-way communication and remote entry control in a single device. They're ideal for installation at entrances where many known and unknown visitors pass through on a regular basis. Door stations can also be used as intercom help points or emergency phones within a larger area like a city, park, or university campus. With countless possibilities for integration, they're powerful enablers of better overall security.

## Access control بصمة الدخول والخروج

### Access a mobile-first world

Mobile access control enables mobile devices — such as smartphones and wearables — to function as credentials in providing access to secured buildings, rooms and areas. This not only increases operational convenience and efficiency for today's mobile-enabled workforces. It's also provides a more cost effective and simpler way for companies to manage identification credentials. Mobile access control can be used as either compliment to and replacement for traditional physical cards and cards.

## Sound system (السماعات (ساوند سيستم

At Axis, we understand the responsibilities that come with supplying network audio systems. That's one of the reasons why all Axis network speakers come equipped with Digital Signal Processing (DSP) capabilities. DSP for public announcement is about analyzing and manipulating sound to improve speech intelligibility. In Axis network speakers, several sound optimization techniques – such as frequency optimization, loudness compensation and dynamic range control – are built into the speakers themselves to deliver excellent audio quality in any environment.

## Sound system

### (السماعات (ساوند سيستم

A network audio system answers the need for different kinds of informative messages and updates in environments like schools, retail stores, hotels and public buildings. For example, you can use your network audio system to make live announcements calling someone to a specific area (such as a colleague to the clothing department). To make scheduled announcements (about the start of the school day, for instance). Or to issue live or triggered announcements during an emergency.
